Re: Large Missile Impact Testing

To whom it may concern,

Blackwater Testing Inc. performed Large Missile Impact testing on polycarbonate panels provided by Hanwood Enterprises. This test is relevant to TAS 201-94 and ASTM E1996 testing protocols. These procedures impact specimens with 8 foot long 2"X4" traveling at 50 ft/s from muzzle. These tests are used in Hurricane Prone areas on products that will safeguard a dwelling's interior from climate conditions relevant to the testing standard scope of use.
